EAGLE TOKEN

Whitepaper

A mobile-first mining protocol for earning EAGLE through participation, referrals, and engagement — built on a server-authoritative architecture.

1. Introduction

Eagle Token (EAGLE) is a mobile-first mining application delivered as a Progressive Web App (PWA). Rather than requiring specialized mining hardware, Eagle Token lets participants accrue EAGLE by keeping a mining session running, completing lightweight tasks, referring other users, and engaging with rewarded content — all governed by rules enforced on the server, not the client.

This document describes how mining, referrals, and boosts work today, the token's supply model, and the architectural principles behind the system. It is a living draft and will be revised as the project moves through development, audit, and launch.

2. How Mining Works

Mining in Eagle Token runs in fixed-length sessions. A user starts a session, and it runs to completion at a locked-in rate — the client cannot shorten, restart, or otherwise manipulate an active session. At the end of a session, accrued EAGLE is claimed and credited to the user's balance.

Mining rate composition

A user's mining rate is the sum of several independent components:

- **Base rate** — a fixed baseline rate every miner starts with.
- **Task bonus** — a per-task bonus for each currently active completed task, which lapses after a set expiry window unless renewed.
- **Referral bonus** — a bonus for each actively-mining user a person has referred, capped at a maximum rate.
- **Ad-boost bonus** — a temporary bonus per rewarded ad watched (see Section 5), expiring independently per slot.

All of these components are recomputed from ground truth — the underlying task, referral, and ad-boost records — rather than trusted as a cached number, so the rate self-heals if any single update is missed or fails partway through.

3. Tokenomics

EAGLE has a fixed, non-inflationary total supply. There is no admin-editable mechanism to mint beyond this cap.

Parameter	Value
Total Supply	74,184,000,000,000,000 EAGLE (74,184 trillion)
Base Mining Rate	1.0 EAGLE / hour

Task Completion Bonus	+0.1 EAGLE / hour per active task
Referral Mining Bonus	+0.1 EAGLE / hour per active referral (capped at 2.0 EAGLE/hr)
Ad-Boost Bonus	+0.2 EAGLE / hour per ad, for 4 hours (up to 4 slots)
Registration Bonus	10 EAGLE, one-time, for every new user
Referral Reward Bonus	10 EAGLE, one-time, to the referrer per successful referral
Session Length	24 hours, fixed

All rate parameters above (task bonus, referral bonus, ad-boost bonus, session length, etc.) are admin-tunable within the ranges the protocol enforces, and may be adjusted over time to balance the network.

4. Referral Program

Every user has a unique referral code. When a new user signs up through that code, the referrer earns a one-time reward once the referral is confirmed, plus an ongoing mining-rate bonus for as long as the referred user is actively mining.

The referral bonus is recalculated from the real mining state of every referred account rather than a static flag — if a referred user's session ends, their referrer's bonus is adjusted automatically and immediately, including live-patching any mining session already in progress.

5. Rewarded-Ad Boosts

To give users an additional, opt-in way to increase their mining rate, Eagle Token offers four independent ad-boost slots. Watching a rewarded ad in a slot grants +0.2 EAGLE/hour for 4 hours; each slot can be rewatched the moment its own window lapses, independent of the other three.

Boosts stack additively with the task and referral bonuses described above, up to a combined maximum, and — like the referral bonus — are recomputed from ground truth so an expired boost drops off automatically without requiring the user to start a new session.

6. Architecture & Security

Eagle Token's economic logic — mining rates, session timing, referral bonuses, and balances — is enforced entirely server-side. The client application requests actions (start a session, complete a task, claim a boost) but never determines their outcome; all state changes are computed and written by the backend.

This design specifically closes off classes of manipulation common to naive mining apps: client-side balance edits, inflated session durations, and forged referral or task completions are all rejected, because the server never trusts a value it can instead compute itself.

7. Roadmap Summary

Eagle Token is progressing through three phases in 2026 — project definition, development and testing, and public launch — ahead of a targeted Token Generation Event. See the accompanying Roadmap document for the full timeline and milestone details.

8. Future: Goldfish Network

Goldfish Network is a planned decentralized social media platform and the next evolution of the Eagle Token ecosystem. It is a forward-looking initiative, not a currently shipped feature, and details below are subject to change as design and development progress.

Continued earning beyond mining

Where Eagle Token's current earning model centers on running mining sessions, Goldfish Network is intended to let users continue earning tokens through social engagement — posting, interacting, and participating on the network — once their involvement in mining winds down. Engagement-based earning is planned to extend to new users as well, so participation is not limited to those who mined during the Eagle Token phase.

Token identity

The token is expected to keep the EAGLE name, but the community may vote to rebrand it to GOLDFISH alongside the network's launch. Any rebrand would be contingent on that vote passing, not a predetermined outcome.

In-app wallet with P2P transfers

Goldfish Network is planned to include a built-in wallet with a peer-to-peer transfer interface, allowing users to send tokens directly to one another within the app rather than only accruing them through mining, tasks, referrals, or social engagement.

9. Disclaimer

This whitepaper is provided for informational purposes only and does not constitute financial, investment, or legal advice, nor an offer or solicitation to buy or sell any security or token. Tokenomics parameters, timelines, and features described here are subject to change as the project develops. Participation in any future token generation event or exchange listing may be subject to regulatory restrictions in your jurisdiction. Nothing in this document should be relied upon as a guarantee of future value, functionality, or dates.
